

HALVES AND QUARTERS

Collect some small 'treasure' from your house (e.g. stones, beads, lego etc).

Top Tip! You will need to collect an even number of treasure. Remember our rhyme - '0, 2, 4, 6, 8 even numbers they are great!'

Halves: Count the total number of treasure you have collected and then share them equally into two piles.

Quarters: Count the total number of treasure you have collected and then share them equally into four piles.

You have now halved and quartered your treasure! Can you try again using different amounts?
